Nguyễn Bùi Gia Huy

Software Engineer

0395370705 nguyenbuigiahuy2507@gmail.com Bình Thạnh, TP.Hồ Chí Minh

RESUME SUMMARY

Third-year Software Engineering student with hands-on backend development experience through remote and onboard. Developed production-ready modules for e-commerce and supply chain systems using Java Spring Boot and ASP.NET Core, focusing on secure architectures, real-time features, and scalable designs. Passionate about deepening expertise in C#, system design patterns, and SOLID principles, with a clear plan to secure a Junior Backend Engineer role within the next year, progress toward Mid-level, continue improving Japanese proficiency, and contribute meaningfully to large-scale system architecture.

EDUCATION

FPT University Oct 2023 - 2027 (Expected)

Software Engineering

GPA: **3.2/4**

Relevant Coursework: Data Structures & Algorithms · Database Systems · Object-Oriented Design · Software Architecture · Computer Networking · Software Testing

TECHNICAL SKILLS

Languages	Java 17/21 (Core, Stream API), C#(.NET, Window Forms), SQL (Index, Transaction).
Framework	Spring Boot, Spring Security, Spring Data JPA, Hibernate, ASP.NET Core, EF Core.
Database & Caching	SQL Server, MySQL, MongoDB, Redis (Caching, Distributed Locking).
Communications & Tools	RESTful API, rGPC, Git, GitHub, GitLab, Postman, ngrok.
Architecture & Design	MicroServices, Modular Monolith, Clean Architecture, SOLID principles, CQRS, MVC.
AI Development	Experience using AI tools (Claude CLI, Cursor, Antigravity, e.g) in software development, familar with modern skills and workflows.

WORK EXPERIENCE

FPT Software [Dec 2025] - Present

Backend Intern | Tech: C# ASP.NET, RESTful API, SQL Server, Redis, Clean Architecture, JWT, 3-Party Services.

- **Feature Development**: Designed and implemented secure Authentication & RBAC system using JWT + Google OAuth 2.0, delivering strict role-based access control for Admin, Manager, Customer, and Staff.
- **Performance Optimization**: Optimized high-traffic authentication flows by migrating Refresh Token and OTP operations to Redis In-Memory cache while implementing 2FA via MailKit and BCrypt hashing, significantly reducing database load.
- **Core Architecture**: Architected Delivery Engine managing full lifecycle of logistics orders across 7 complex states, supporting Online Orders, Returns, and internal supply chain coordination (Supplier-Warehouse-Franchise).
- **Real-time Integration**: Built real-time inventory synchronization between Delivery, Stock, and Inventory services using EF Core, combined with Haversine geo-routing for accurate ETA and Cloudinary-powered paperless POD with e-signature.
- **API & Documentation**: Produced comprehensive Swagger documentation to ensure seamless cross-team collaboration between frontend and backend.

TCH Company [Sep 2025] - [Dec 2025]

Backend Developer | Tech: Java 17, Spring Boot, MySQL, Restful API, Swgger, Git

- **Feature Development:** Developed end-to-end Cost Estimator module that automates final landed cost calculation for imported goods and optimizes delivery scheduling using Java Spring Boot and RESTful APIs.

- **Performance Optimization:** Engineered high-performance improvements including product API latency reduction from ~203ms to ~89ms, 40% faster cost estimation processing, and ~30% reduction in database query response time through refined JPA/Hibernate queries.
- **API & Documentation:** Designed and documented clean RESTful endpoints with Swagger, enabling smooth cross-team collaboration and faster integration with frontend and testing teams.

PROJECT

Ameri Franchise Coffee [Jan 2026] - [Apr 2026]

Backend Developer - Team size: 5 | Tech: ASP.NET CORE, SQL Server, EF Core, JWT, Cloudinary, Mailkit, Redis, Google OAuth

- **Authentication & Security Module**: Designed and implemented a secure authentication system with JWT, Google OAuth 2.0, and Email/Password, integrated RBAC for role-based access control (Admin, Manager, Customer, Staff), and managed sessions using Redis for Refresh Token and OTP storage.
- **Logistics & Delivery Module**: Built the core Delivery Engine handling full lifecycle of Online Orders, Returns, and Internal Transfers across 7 complex states, with real-time cross-service communication between Delivery, Stock, and Inventory using EF Core.
- **Location & ETA Algorithm**: Implemented Haversine algorithm for accurate geo-distance calculation (Lat/Lng) and ETA forecasting to optimize delivery routing.
- **Paperless Logistics Flow**: Developed digital POD (Proof of Delivery) system integrated with Cloudinary for image storage and electronic signature, enabling fully paperless delivery confirmation.
- Achieved perfect inventory synchronization by tightly coupling delivery status with automatic stock updates, eliminating data discrepancies between physical and system inventory.
- Optimized Authentication performance by migrating Refresh Token and OTP operations to Redis In-Memory cache, reducing database queries by 40% on high-traffic APIs.
- Successfully digitized the entire logistics process from manual to 100% paperless using Cloudinary and real-time notifications, significantly improving operational efficiency and customer experience.

Second hand EV Battery Trading [Sep 2025] - [Dec 2025]

Backend Developer - Team size: 3 | Tech: Java 17, Spring Boot 3.x, Hibernate, Spring Security(JWT), SQL Server, VNPay, WebSocket(STOMP), DocuSeal API, Cloudinary, RESTful API

- **Architected** entire backend infrastructure from scratch and designed a normalized SQL Server database with 17 tables supporting complex order life-cycles and RBAC for 5 distinct actor types.
- **Engineered** a secure escrow payment system integrated with VNPay, implementing state-machine flows for automated dispute resolution and refunds.
- **Integrated DocuSeal API** via webhooks to automate legally-binding electronic contract generation upon checkout.
- **Implemented** intelligent price suggestion engine using Google Gemini AI to assist sellers based on vehicle conditions.
- **Built** real-time chat and notification system with WebSocket (STOMP) for seamless buyer-seller communication.
- **Designed** and secured 100+ RESTful APIs using Spring Security (JWT) and Hibernate, optimized complex product filtering queries while mitigating common security vulnerabilities.
